1510.06699 — formula report

1063 inline formulas (section omitted; all rendered), 279 display equations, 7 tables, 38 unrecovered image regions.

Flagged, not acted on — 1 of 68 shown

Conf. MathPix confidence: ■ ≥0.9 ■ 0.5–0.9 ■ <0.5 — no value

Residual render vs scan (inkdrill): • C component • W weak • S stable • N noise • K clean • not measured

The remaining 67 flagged rows are stated as a count.

Each differs from its scan by fewer than 20 components, which is the tail of the distribution rather than its bulk: 32 are component (`C`), 35 weak (`W`). By MathPix confidence: 35 at ≥0.9, 20 in 0.6–0.9, 12 below 0.6, 0 with none. Out/465 sampled twenty rows drawn from the ≥0.9 band corpus-wide and found eighteen purely typographic differences, one typographic plus a crop overrun, one borderline and *no* unambiguous content errors — so a high-confidence flag here is evidence of a rendering difference, not of a defect. Every row is in `report.ink.json`.

Doubted but correct (1)
