

0707.4470: formula evidence

The page, the confidence and the picture of an inline formula are its HOST LINE’s — a formula has none of its own. A line’s confidence is not a formula’s.

Inline formulas (first occurrence)

Identifier	Page	Conf.	LaTeX source	Rendered	Image
0707.4470_F00001	1	■1.000	$\nabla \cdot \mathbf{D} = \rho$	$\nabla \cdot \mathbf{D} = \rho$	guishing attributes are that the Gauss constraint $\nabla \cdot \mathbf{D} = \rho$ is exactly conserved in
0707.4470_F00002	2	■1.000	$\mathbf{E} = -\nabla \phi$	$\mathbf{E} = -\nabla \phi$	a discrete sense, and electrostatic solutions of the form $\mathbf{E} = -\nabla \phi$ indeed remain
0707.4470_F00003	3	■0.677	$\mathbf{B} = \nabla \times \mathbf{A}$	$\mathbf{B} = \nabla \times \mathbf{A}$	sis relation $\mathbf{B} = \nabla \times \mathbf{A}$, where $\mathbf{B}$ is the magnetic flux and $\mathbf{A}$ is the magnetic vector
0707.4470_F00004	3	■0.677	$\mathbf{B}$	$\mathbf{B}$	sis relation $\mathbf{B} = \nabla \times \mathbf{A}$, where $\mathbf{B}$ is the magnetic flux and $\mathbf{A}$ is the magnetic vector
0707.4470_F00005	3	■1.000	$\nabla \cdot \nabla \times = 0$	$\nabla \cdot \nabla \times = 0$	potential. Because of the vector calculus identities $\nabla \cdot \nabla \times = 0$ and $\nabla \times \nabla = 0$, this
0707.4470_F00006	3	■1.000	$\nabla \times \nabla = 0$	$\nabla \times \nabla = 0$	potential. Because of the vector calculus identities $\nabla \cdot \nabla \times = 0$ and $\nabla \times \nabla = 0$, this
0707.4470_F00007	3	■0.959	$\mathbf{A} \mapsto \mathbf{A} + \nabla f$	$\mathbf{A} \mapsto \mathbf{A} + \nabla f$	cally divergence-free. Second, any transformation $\mathbf{A} \mapsto \mathbf{A} + \nabla f$ has no effect on $\mathbf{B}$;
0707.4470_F00008	3	■1.000	$\nabla \cdot \mathbf{D} = \rho$	$\nabla \cdot \mathbf{D} = \rho$	is $\nabla \cdot \mathbf{D} = \rho$ (which must be zero by Gauss' law). A similar argument also explains
0707.4470_F00009	3	■1.000	ϕ	ϕ	under constant shifts in the scalar potential ϕ . Therefore, a proper variational
0707.4470_F00010	3	■1.000	$\mathrm{d}^2 = 0$	$\mathrm{d}^2 = 0$	tities such as $\mathrm{d}^2 = 0$ (which encapsulates the previous div-curl-grad relations)
0707.4470_F00011	4	■1.000	F	F	that are dual to one another (the spacetime forms F and $G = *F$), and hence they
0707.4470_F00012	4	■1.000	$G = * F$	$G = *F$	that are dual to one another (the spacetime forms F and $G = *F$), and hence they
0707.4470_F00013	5	■0.979	E	E	forms, we begin by replacing the electric field with a 1-form E and the magnetic
0707.4470_F00014	5	■0.995	B	B	flux density by a 2-form B . These have the coordinate expressions
0707.4470_F00015	6	■1.000	$\mathbf{E} = (E_x, E_y, E_z)$	$\mathbf{E} = (E_x, E_y, E_z)$	where $\mathbf{E} = (E_x, E_y, E_z)$ and $\mathbf{B} = (B_x, B_y, B_z)$. The motivation for choosing E as a
0707.4470_F00016	6	■1.000	$\mathbf{B} = (B_x, B_y, B_z)$	$\mathbf{B} = (B_x, B_y, B_z)$	where $\mathbf{E} = (E_x, E_y, E_z)$ and $\mathbf{B} = (B_x, B_y, B_z)$. The motivation for choosing E as a
0707.4470_F00017	6	■0.995	$\mathbf{E}$	$\mathbf{E}$	where $\mathbf{E}$ is integrated over curves and $\mathbf{B}$ is integrated over surfaces. Similarly,
0707.4470_F00018	6	■0.999	H	H	1-form H and a 2-form D .
0707.4470_F00019	6	■0.999	D	D	1-form H and a 2-form D .
0707.4470_F00020	6	■1.000	ϵ	ϵ	As shown in Bossavit and Kettunen (2000), we can view ϵ and μ as corresponding
0707.4470_F00021	6	■1.000	μ	μ	As shown in Bossavit and Kettunen (2000), we can view ϵ and μ as corresponding
0707.4470_F00022	6	■0.968	$*_{\epsilon}$	$*_{\epsilon}$	to Hodge operators $*_{\epsilon}$ and $*_{\mu}$, which map the 1-form “fields” to 2-form “fluxes” in
0707.4470_F00023	6	■0.968	$*_{\mu}$	$*_{\mu}$	to Hodge operators $*_{\epsilon}$ and $*_{\mu}$, which map the 1-form “fields” to 2-form “fluxes” in
0707.4470_F00024	6	■1.000	$\epsilon = \epsilon_0$	$\epsilon = \epsilon_0$	Note that in a vacuum, with $\epsilon = \epsilon_0$ and $\mu = \mu_0$ constant, one can simply express
0707.4470_F00025	6	■1.000	$\mu = \mu_0$	$\mu = \mu_0$	Note that in a vacuum, with $\epsilon = \epsilon_0$ and $\mu = \mu_0$ constant, one can simply express
0707.4470_F00026	6	■0.531	$\epsilon_0 = \mu_0 = c = 1$	$\epsilon_0 = \mu_0 = c = 1$	that $\epsilon_0 = \mu_0 = c = 1$, and hence ignoring the distinction between $\mathbf{E}$ and $\mathbf{D}$ and
0707.4470_F00027	6	■0.925	$\rho \mathrm{d}x \wedge \mathrm{d}y \wedge \mathrm{d}z$	$\rho \mathrm{d}x \wedge \mathrm{d}y \wedge \mathrm{d}z$	the <i>charge density 3-form</i> $\rho \mathrm{d}x \wedge \mathrm{d}y \wedge \mathrm{d}z$, as well as the <i>current density 2-form</i>
0707.4470_F00028	6	■1.000	$J = J_x \mathrm{d}y \wedge \mathrm{d}z + J_y \mathrm{d}z \wedge \mathrm{d}x + J_z \mathrm{d}x \wedge \mathrm{d}y$	$J = J_x \mathrm{d}y \wedge \mathrm{d}z + J_y \mathrm{d}z \wedge \mathrm{d}x + J_z \mathrm{d}x \wedge \mathrm{d}y$	$J = J_x \mathrm{d}y \wedge \mathrm{d}z + J_y \mathrm{d}z \wedge \mathrm{d}x + J_z \mathrm{d}x \wedge \mathrm{d}y$. These are required to satisfy the continuity
0707.4470_F00029	6	■1.000	$\partial_t \rho + \mathrm{d}J = 0$	$\partial_t \rho + \mathrm{d}J = 0$	of charge condition $\partial_t \rho + \mathrm{d}J = 0$, which can be understood as a conservation law
0707.4470_F00030	7	■0.992	ρ	ρ	2.3. The Source 3-Form. Likewise, the charge density ρ and current density J
0707.4470_F00031	7	■0.992	J	J	2.3. The Source 3-Form. Likewise, the charge density ρ and current density J
0707.4470_F00032	7	■1.000	$\mathcal{J}$	$\mathcal{J}$	Having defined $\mathcal{J}$ in this way, the continuity of charge condition simply requires
0707.4470_F00033	7	■0.986	$\mathrm{d}\mathcal{J} = 0$	$\mathrm{d}\mathcal{J} = 0$	that $\mathcal{J}$ be closed, i.e., $\mathrm{d}\mathcal{J} = 0$.
0707.4470_F00034	7	■1.000	A	A	2.4. Electromagnetic Variational Principle. Let A be the electromagnetic po-
0707.4470_F00035	7	■1.000	$F = \mathrm{d}A$	$F = \mathrm{d}A$	tential 1-form, satisfying $F = \mathrm{d}A$, over the spacetime manifold X . Then define the
0707.4470_F00036	7	■1.000	X	X	tential 1-form, satisfying $F = \mathrm{d}A$, over the spacetime manifold X . Then define the
0707.4470_F00037	7	■1.000	α	α	Now, take a variation α of A , where α vanishes on the boundary ∂X . Then the
0707.4470_F00038	7	■1.000	∂X	∂X	Now, take a variation α of A , where α vanishes on the boundary ∂X . Then the
0707.4470_F00039	7	■1.000	$G = *F = * \mathrm{d}A$	$G = *F = * \mathrm{d}A$	2.5. Variational Derivation of Maxwell's Equations. Since $G = *F = *\mathrm{d}A$, then

Identifier	Page	Conf.	LaTeX source	Rendered	Image
0707.4470_F00040	7	■ 0.999	$\mathrm{d} G=\mathrm{d} \mathscr{J}$	$\mathrm{d} G=\mathscr{J}$	clearly Equation 2.1 is equivalent to $\mathrm{d} G=\mathscr{J}$. Furthermore, since $\mathrm{d}^2=0$, it follows
0707.4470_F00041	8	■ 1.000	$\mathrm{d} F=\mathrm{d}^2 A=0$	$\mathrm{d} F=\mathrm{d}^2 A=0$	that $\mathrm{d} F=\mathrm{d}^2 A=0$. Hence, Maxwell’s equations with respect to the Maxwell and
0707.4470_F00042	8	■ 0.991	(x, y, z, t)	(x, y, z, t)	Suppose now we choose the standard coordinate system (x, y, z, t) on Minkowski
0707.4470_F00043	8	■ 1.000	$X=\mathbb{R}^{3,1}$	$X=\mathbb{R}^{3,1}$	space $X=\mathbb{R}^{3,1}$, and define E and B through the relation $F=E \wedge \mathrm{d} t+B$. Then a
0707.4470_F00044	8	■ 1.000	$F=E \wedge \mathrm{d} t+B$	$F=E \wedge \mathrm{d} t+B$	space $X=\mathbb{R}^{3,1}$, and define E and B through the relation $F=E \wedge \mathrm{d} t+B$. Then a
0707.4470_F00045	8	■ 1.000	$G=* F=H \wedge \mathrm{d} t-D$	$G=* F=H \wedge \mathrm{d} t-D$	Likewise, if $G=* F=H \wedge \mathrm{d} t-D$, then Equation 2.3 is equivalent to
0707.4470_F00046	8	■ 1.000	G	G	fields, while G acts as a Lagrange multiplier, weakly enforcing the constraint
0707.4470_F00047	8	■ 1.000	α, ϕ, γ	α, ϕ, γ	Then, taking the variation of the action along some α, ϕ, γ (vanishing on ∂X), we
0707.4470_F00048	9	■ 1.000	$\nabla \cdot \mathbf{B}$	$\nabla \cdot \mathbf{B}$	$\nabla \cdot \mathbf{B}$ and $\nabla \cdot \mathbf{D}-\rho$. Therefore, the divergence equations (2.5) and (2.7) can
0707.4470_F00049	9	■ 1.000	$\mathrm{d} A$	$\mathrm{d} A$	exterior derivative $\mathrm{d} A$ of the electromagnetic potential, and not on the value of
0707.4470_F00050	9	■ 1.000	$A \mapsto A+\mathrm{d} f$	$A \mapsto A+\mathrm{d} f$	$A \mapsto A+\mathrm{d} f$ leaves $\mathrm{d} A$, and hence Maxwell’s equations, unchanged. Choosing
0707.4470_F00051	9	■ 1.000	$\phi=A(\partial / \partial t)=0$	$\phi=A(\partial / \partial t)=0$	potential $\phi=A(\partial / \partial t)=0$ (the so-called Weyl gauge or temporal gauge), and
0707.4470_F00052	9	■ 1.000	$\mathrm{d}^2 A=0$	$\mathrm{d}^2 A=0$	identity $\mathrm{d}^2 A=0$; they are not actually part of the Euler–Lagrange equations. A
0707.4470_F00053	11	■ 1.000	n	n	n -dimensional manifold X is replaced by a discrete mesh—precisely, by a cell
0707.4470_F00054	11	■ 1.000	K	K	2-dimensional surface. We will generally denote the complex by K , and a cell in
0707.4470_F00055	11	■ 1.000	σ	σ	the complex by σ .
0707.4470_F00056	11	■ 0.999	$* K$	$* K$	Given a mesh K , one can construct a <i>dual mesh</i> $* K$, where each k -cell σ
0707.4470_F00057	11	■ 0.999	k	k	Given a mesh K , one can construct a <i>dual mesh</i> $* K$, where each k -cell σ
0707.4470_F00058	11	■ 0.364	$(n-k)$	$(n-k)$	corresponds to a dual $(n-k)$ -cell $* \sigma$. ($* K$ is “dual” to K in the sense of a graph
0707.4470_F00059	11	■ 0.364	$* \sigma$	$* \sigma$	corresponds to a dual $(n-k)$ -cell $* \sigma$. ($* K$ is “dual” to K in the sense of a graph
0707.4470_F00060	11	■ 0.364	$(* K$	$(* K$	corresponds to a dual $(n-k)$ -cell $* \sigma$. ($* K$ is “dual” to K in the sense of a graph
0707.4470_F00061	11	■ 0.972	$(n-1)$	$(n-1)$	corresponding n -simplices share an $(n-1)$ -simplex, and so on. This is called
0707.4470_F00062	11	■ 1.000	α^k	α^k	ferential forms. A discrete k -form α^k assigns a real number to each oriented
0707.4470_F00063	11	■ 1.000	σ^k	σ^k	k -dimensional cell σ^k in the mesh K . (The superscripts k are not actually re-
0707.4470_F00064	11	■ 1.000	$\left\langle \alpha^k, \sigma^k \right\rangle$	$\left\langle \alpha^k, \sigma^k \right\rangle$	form or cell we are dealing with.) This value is denoted by $\left\langle \alpha^k, \sigma^k \right\rangle$, and can be
0707.4470_F00065	12	■ 1.000	σ^1	σ^1	show one particular primal edge σ^1 (left) and its corresponding dual edge $* \sigma^1$
0707.4470_F00066	12	■ 1.000	$* \sigma^1$	$* \sigma^1$	show one particular primal edge σ^1 (left) and its corresponding dual edge $* \sigma^1$
0707.4470_F00067	12	■ 1.000	$\mathrm{CH}\left(\sigma^1, * \sigma^1\right)$	$\mathrm{CH}\left(\sigma^1, * \sigma^1\right)$	(right); the convex hull of these cells $\mathrm{CH}\left(\sigma^1, * \sigma^1\right)$ is shaded dark grey.
0707.4470_F00068	12	■ 1.000	$\left\langle \cdot, \cdot \right\rangle$	$\left\langle \cdot, \cdot \right\rangle$	are called <i>chains</i> , and discrete differential forms are <i>cochains</i> , where $\langle \cdot, \cdot \rangle$ is the
0707.4470_F00069	12	■ 0.994	$n-k$	$n-k$	a natural correspondence between primal k -forms and dual $(n-k)$ -forms, since
0707.4470_F00070	12	■ 0.884	$k+1$	$k+1$	Therefore, if α is a discrete differential k -form, then the $(k+1)$ -form $\mathrm{d} \alpha$ is defined
0707.4470_F00071	12	■ 0.884	$\mathrm{d} \alpha$	$\mathrm{d} \alpha$	Therefore, if α is a discrete differential k -form, then the $(k+1)$ -form $\mathrm{d} \alpha$ is defined
0707.4470_F00072	12	■ 0.604	$(k+1)$	$(k+1)$	on any $(k+1)$ -chain σ by
0707.4470_F00073	12	■ 1.000	$\partial \sigma$	$\partial \sigma$	where $\partial \sigma$ is the k -chain boundary of σ . For this reason, d is often called the
0707.4470_F00074	13	■ 1.000	$* \alpha$	$* \alpha$	versions can be substituted. Given a discrete form α , its <i>Hodge star</i> $* \alpha$ is defined
0707.4470_F00075	13	■ 1.000	$ \sigma $	$ \sigma $	where $ \sigma $ and $ \sigma $ are the volumes of these elements, and κ is the causality
0707.4470_F00076	13	■ 1.000	$ \sigma $	$ \sigma $	where $ \sigma $ and $ \sigma $ are the volumes of these elements, and κ is the causality
0707.4470_F00077	13	■ 1.000	κ	κ	where $ \sigma $ and $ \sigma $ are the volumes of these elements, and κ is the causality
0707.4470_F00078	13	■ 0.755	$\mathbb{L}^2$	$\mathbb{L}^2$	<i>Inner Product</i> . Define the $\mathbb{L}^2$ <i>inner product</i> $(\cdot, \cdot)$ between two primal k -forms to
0707.4470_F00079	13	■ 0.755	$(\cdot, \cdot)$	$(\cdot, \cdot)$	<i>Inner Product</i> . Define the $\mathbb{L}^2$ <i>inner product</i> $(\cdot, \cdot)$ between two primal k -forms to
0707.4470_F00080	13	■ 0.978	$\mathrm{CH}(\sigma, * \sigma)$	$\mathrm{CH}(\sigma, * \sigma)$	where the sum is taken over all k -dimensional elements σ , and $\mathrm{CH}(\sigma, * \sigma)$ is
0707.4470_F00081	13	■ 1.000	$\sigma \cup * \sigma$	$\sigma \cup * \sigma$	the n -dimensional convex hull of $\sigma \cup * \sigma$ (see Figure 1). The final equality holds
0707.4470_F00082	13	■ 0.991	$ \mathrm{CH}(\sigma, * \sigma) =\binom{n}{k} \sigma \cdot \sigma $	$ \mathrm{CH}(\sigma, * \sigma) =\binom{n}{k} \sigma \cdot \sigma $	one another, and hence $ \mathrm{CH}(\sigma, * \sigma) =\binom{n}{k} \sigma \cdot \sigma $. (Indeed, this is one of the
0707.4470_F00083	13	■ 1.000	$\alpha \wedge * \beta$	$\alpha \wedge * \beta$	primal-dual convex hulls.) This inner product can be expressed in terms of $\alpha \wedge * \beta$,
0707.4470_F00084	13	■ 0.865	δ	δ	d and $*$, we immediately have a discrete codifferential δ , with the same formal
0707.4470_F00085	13	■ 0.995	$\mathrm{d}, *, \delta$	$\mathrm{d}, *, \delta$	dual discrete forms, along with the corresponding operators $\mathrm{d}, *, \delta$, for the case
0707.4470_F00086	13	■ 1.000	σ_i^k	σ_i^k	on each k -cell of the mesh. That is, given a list of k -cells σ_i^k , the entries of the

Identifier	Page	Conf.	LaTeX source	Rendered	Image
0707.4470_F00087	13	0.803	$\backslash\alpha_{\mathrm{i}}=\backslash\left\langle\backslash\mathrm{angle}\backslash\alpha,\backslash\sigma_{\mathrm{i}}^{\mathrm{k}}\right\rangle\backslash\mathrm{angle}$	$\alpha_i = \langle \alpha, \sigma_i^k \rangle$	vector are $\alpha_i = \langle \alpha, \sigma_i^k \rangle$. The exterior derivative d , taking k -forms to $(k+1)$ -forms,
0707.4470_F00088	14	1.000	$\mathrm{k}=0,1,2,3$	$k = 0, 1, 2, 3$	cells of the primal mesh, for $k = 0, 1, 2, 3$; the bottom row shows the location of the
0707.4470_F00089	14	0.965	$*$	$*$	and δ map “horizontally” between k and $(k+1)$ forms, while the Hodge star $*$
0707.4470_F00090	14	1.000	$*^{\{-1\}}$	$*^{-1}$	and its inverse $*^{-1}$ map “vertically” between primal and dual forms.
0707.4470_F00091	14	0.510	$\backslash\kappa\backslash\left(\backslash\sigma_{\mathrm{i}}^{\mathrm{k}}\right)\backslash\frac{\backslash\left *\backslash\sigma_{\mathrm{i}}^{\mathrm{k}}\right }{\left \backslash\sigma_{\mathrm{i}}^{\mathrm{k}}\right }\backslash\sigma_{\mathrm{i}}^{\mathrm{k}}\right \backslash\left(\backslash\sigma_{\mathrm{i}}^{\mathrm{k}}\right)\backslash\left \backslash\sigma_{\mathrm{i}}^{\mathrm{k}}\right }$	$\kappa\left(\sigma_i^k\right)\frac{\left *\sigma_i^k\right }{\left \sigma_i^k\right }$	of the diagonal Hodge star, it is the diagonal matrix with entries $\kappa\left(\sigma_i^k\right)\frac{\left *\sigma_i^k\right }{\left \sigma_i^k\right }$. The
0707.4470_F00092	14	1.000	$\backslash\mathrm{partial}\mathrm{K}$	∂K	∂K . For example, in electromagnetism, we may wish to set initial conditions for
0707.4470_F00093	14	1.000	$\mathrm{t}_{\{0\}}$	t_0	E and B at time t_0 — but while B is defined on ∂K at t_0 , E is not. In fact, as we
0707.4470_F00094	14	1.000	$\mathrm{t}_{\{0\}},\mathrm{E}$	t_0, E	E and B at time t_0 — but while B is defined on ∂K at t_0 , E is not. In fact, as we
0707.4470_F00095	14	1.000	$\mathrm{t}_{\{1\}}$	t_1	will see, E lives on edges that are extruded between the time slices t_0 and t_1 , so
0707.4470_F00096	14	1.000	$\mathrm{t}_{\{1 / 2\}}$	$t_{1 / 2}$	unless we modify our definitions, we can only initialize E at the half-step $t_{1 / 2}$.
0707.4470_F00097	15	0.608	$\mathrm{n}-1$	$n-1$	addition of a dual vertex at the circumcenter of each boundary $(n-1)$ -simplex, in
0707.4470_F00098	15	0.844	$(\mathrm{k}-1)$	$(k-1)$	dimensional shell. That is, each boundary $(k-1)$ -simplex can be thought of
0707.4470_F00099	15	0.997	$*(\backslash\mathrm{partial}\mathrm{K})$	$*(\partial K)$	$*(\partial K)$. In fact, the boundary of the dual is now equal to the dual of the boundary,
0707.4470_F00100	15	1.000	$\backslash\mathrm{partial}(*\mathrm{K})=*(\backslash\mathrm{partial}\mathrm{K})$	$\partial(*K) = *(\partial K)$	i.e., $\partial(*K) = *(\partial K)$. Returning to the example of initial conditions on E and B , we
0707.4470_F00101	15	1.000	$\mathrm{t}_{\{-\backslash\epsilon\mathrm{psilon}\}}$	$t_{-\epsilon}$	vanishingly thin faces (i.e., extruded between some $t_{-\epsilon}$ and t_0 for $\epsilon \rightarrow 0$). Notice
0707.4470_F00102	15	1.000	$\backslash\epsilon\mathrm{psilon}\backslash\rightarrow\mathrm{0}$	$\epsilon \rightarrow 0$	vanishingly thin faces (i.e., extruded between some $t_{-\epsilon}$ and t_0 for $\epsilon \rightarrow 0$). Notice
0707.4470_F00103	16	0.862	$\mathrm{k}-1$	$k-1$	boundary terms. If α is a primal $(k-1)$ -form and β is a primal k -form, then
0707.4470_F00104	16	0.862	$\backslash\mathrm{beta}$	β	boundary terms. If α is a primal $(k-1)$ -form and β is a primal k -form, then
0707.4470_F00105	16	0.894	$*\backslash\mathrm{beta}$	$*\beta$	In the boundary integral, α is still a primal $(k-1)$ -form on ∂K , while $*\beta$ is an
0707.4470_F00106	16	0.991	F,G	F, G	First, we will find a sensible way to define the discrete forms F, G , and $\mathcal{J}$ on a

0707.4470_F00195	31	■ 1.000	$\rho = \nabla \cdot \mathbf{D}$	$\rho = \nabla \cdot \mathbf{D}$	turns out to be the charge density $\rho = \nabla \cdot \mathbf{D}$, which justifies its elimination from
0707.4470_F00196	31	■ 1.000	f	f	are invariant under gauge transformations of the form $A \mapsto A + \mathrm{d} f$, where f is any
0707.4470_F00197	31	■ 1.000	$A_{\mathrm{t}} = 0$	$A_t = 0$	Weyl gauge, so that the time component $A_t = 0$. Therefore, we can assume that
0707.4470_F00198	31	■ 0.749	$A_{\mathrm{x}}, A_{\mathrm{y}}, A_{\mathrm{z}}$	A_x, A_y, A_z	In fact, A_x, A_y, A_z are precisely the components of the familiar vector potential $\mathbf{A}$,
0707.4470_F00199	31	■ 0.749	$\mathbf{A}$	$\mathbf{A}$	In fact, A_x, A_y, A_z are precisely the components of the familiar vector potential $\mathbf{A}$,
0707.4470_F00200	31	■ 0.880	$A = \mathbf{A}^b$	$A = \mathbf{A}^b$	i.e., $A = \mathbf{A}^b$.
0707.4470_F00201	31	■ 1.000	d_{t}	$\mathbf{d}_t$	nate, we can now define two new “partial exterior derivative” operators, $\mathbf{d}_t$ (time)
0707.4470_F00202	32	■ 0.934	d_{s}	$\mathbf{d}_s$	and $\mathbf{d}_s$ (space), where $\mathbf{d} = \mathbf{d}_t + \mathbf{d}_s$. Since A contains no $\mathrm{d} t$ terms, $\mathbf{d}_s A$ is a 2-form
0707.4470_F00203	32	■ 0.934	$\mathrm{d} = \mathrm{d}_{\mathrm{t}} + \mathrm{d}_{\mathrm{s}}$	$\mathbf{d} = \mathbf{d}_t + \mathbf{d}_s$	and $\mathbf{d}_s$ (space), where $\mathbf{d} = \mathbf{d}_t + \mathbf{d}_s$. Since A contains no $\mathrm{d} t$ terms, $\mathbf{d}_s A$ is a 2-form
0707.4470_F00204	32	■ 0.934	$\mathrm{d} t$	$\mathbf{d} t$	and $\mathbf{d}_s$ (space), where $\mathbf{d} = \mathbf{d}_t + \mathbf{d}_s$. Since A contains no $\mathrm{d} t$ terms, $\mathbf{d}_s A$ is a 2-form
0707.4470_F00205	32	■ 0.934	$\mathrm{d}_{\mathrm{s}} A$	$\mathbf{d}_s A$	and $\mathbf{d}_s$ (space), where $\mathbf{d} = \mathbf{d}_t + \mathbf{d}_s$. Since A contains no $\mathrm{d} t$ terms, $\mathbf{d}_s A$ is a 2-form
0707.4470_F00206	32	■ 1.000	$\mathrm{d}_{\mathrm{t}} A$	$\mathbf{d}_t A$	containing only the space terms of $\mathrm{d} A$, while $\mathbf{d}_t A$ contains the terms involving
0707.4470_F00207	32	■ 0.999	$\mathrm{d}_{\mathrm{s}} D = \rho$	$\mathbf{d}_s D = \rho$	law as the sole Euler–Lagrange equation. The divergence constraint $\mathbf{d}_s D = \rho$,
0707.4470_F00208	32	■ 1.000	t_{f}	t_f	requirement that variations α be fixed at the initial time t_0 and final time t_f . Then,
0707.4470_F00209	32	■ 1.000	Σ	Σ	where Σ denotes a Cauchy surface of X , corresponding to the spatial domain. If
0707.4470_F00210	32	■ 1.000	$\alpha = \mathrm{d}_{\mathrm{s}} f$	$\alpha = \mathbf{d}_s f$	we vary along a gauge transformation $\alpha = \mathbf{d}_s f$, then this becomes
0707.4470_F00211	33	■ 1.000	$\mathrm{d}_{\mathrm{s}} D - \rho$	$\mathbf{d}_s D - \rho$	This indicates that $\mathbf{d}_s D - \rho$ is a conserved quantity, a momentum map, so if
0707.4470_F00212	33	■ 0.986	$\nabla \cdot \mathbf{D}$	$\nabla \cdot \mathbf{D}$	density $\nabla \cdot \mathbf{D}$ is conserved, but more generally that the <i>change</i> in charge is related
0707.4470_F00213	36	■ 1.000	$\mathbb{R}^3$	$\mathbb{R}^3$	Nédélec, J.-C. (1980), Mixed finite elements in $\mathbb{R}^3$. <i>Numer. Math.</i> , 35 (3), 315–341.
