mielke-geometrodynamics_131 DIA_0009	131	—	—	—	 A diagram illustrating a spacetime foliation. It shows a curved, light-blue hypersurface representing a spatial slice Σ_t. Above it, another similar slice is labeled Σ_{t+dt}. A vertical arrow labeled n indicates the normal vector to the slice Σ_t. The entire structure is enclosed within a larger, curved boundary.
mielke-geometrodynamics_200 DIA_0010	200	—	—	—	 A diagram illustrating a wormhole geometry. It shows two flared, blue, funnel-like regions connected by a narrow, central throat. The surface is covered with a grid of lines, and the color transitions from light blue at the edges to a darker purple in the center of the throat.
mielke-geometrodynamics_226 DIA_0011	226	—	—	—	 A diagram illustrating a 3D grid structure, possibly representing a discretized spacetime or a lattice. The grid is composed of many small cubes. A blue line highlights a specific path or boundary within the grid, showing it winding through the structure.
