Conf. MathPix confidence: ■ ≥ 0.9 ■ 0.5–0.9 ■ < 0.5 — no value Residual render vs scan (inkdrill): ● C component ● W weak ● S stable ● N noise ● K clean ● not measured					

Flagged, not acted on: 26 rows, none above the reporting threshold.

Each differs from its scan by fewer than 20 components, which is the tail of the distribution rather than its bulk: 8 are component (C), 18 weak (W). By MathPix confidence: 15 at ≥ 0.9 , 9 in 0.6–0.9, 2 below 0.6, 0 with none. Out/465 sampled twenty rows drawn from the ≥ 0.9 band corpus-wide and found eighteen purely typographic differences, one typographic plus a crop overrun, one borderline and *no* unambiguous content errors — so a high-confidence flag here is evidence of a rendering difference, not of a defect. Every row is in `report.ink.json`.
