voloshin-hypergraph_ EQ0141 (was)	185	■ 0.473	$\tau(\mathcal{H}) = \nu(\mathcal{H}).$	$\tau(\mathcal{H}) = \nu(\mathcal{H}).$	$\tau(\mathcal{H}) = \nu(\mathcal{H}).$
voloshin-hypergraph_ EQ0141 (now)	185	—	$\tau(\mathcal{H}) = \nu(\mathcal{H}).$ a hypergraph, draw	$\tau(\mathcal{H}) = \nu(\mathcal{H}).$ <i>ahypergraph, draw</i>	$\tau(\mathcal{H}) = \nu(\mathcal{H}).$
basis: inferred / ink					
Conf. MathPix confidence: ■ ≥ 0.9 ■ 0.5–0.9 ■ < 0.5 — no value LaTeX source MathPix’s reading, unchanged; Rendered the same reading, with a display environment (align/alignat/flalign/eqnarray/gather/multline/split) mapped to its in-math form so it can typeset in this cell — the two may legitimately differ Residual render vs scan (inkdrill): ● C component ● W weak ● S stable ● N noise ● K clean ● not measured [refined: basis] beside an identifier: the LaTeX-source and Rendered cells both show a VERIFIED refinement, not MathPix’s own reading — <i>basis</i> names what verified it (e.g. ink, source). The original reading is unchanged in the model but is not the one drawn here.
