

bradley_spring22 — formula report

182 inline formulas (section omitted; all rendered), 16 display equations, 0 tables, 10 unrecovered image regions.

Flagged, not acted on: 3 rows, none above the reporting threshold.

Each differs from its scan by fewer than 20 components, which is the tail of the distribution rather than its bulk: 0 are component (C), 3 weak (W). By MathPix confidence: 3 at ≥ 0.9 , 0 in 0.6–0.9, 0 below 0.6, 0 with none. Out/465 sampled twenty rows drawn from the ≥ 0.9 band corpus-wide and found eighteen purely typographic differences, one typographic plus a crop overrun, one borderline and *no* unambiguous content errors — so a high-confidence flag here is evidence of a rendering difference, not of a defect. Every row is in `report.ink.json`.
