

Introduction to Graph and Hypergraph Theory (Vitaly I. Voloshin) (Z-Library) — formula report

2555 inline formulas, 266 display equations, 2 tables, 176 unrecovered image regions.

3 rows show a REFINEMENT below, not the OCR reading: 3 verified against the inferred. Each is marked [refined] beside its identifier. The model is unchanged — the original reading is still what ‘latex’ holds; this projection chose the refinement for them. Rows: Introduction_to_Graph_and_Hypergraph_Theory_Vitaly_I._Voloshin__Z-Library_EQ0133, Introduction_to_Graph_and_Hypergraph_Theory_Vitaly_I._Voloshin__Z-Library_EQ0141, Introduction_to_Graph_and_Hypergraph_Theory_Vitaly_I._Voloshin__Z-Library_EQ0197

Introduction_to_Graph_and_The Graph_	088	Diagram illustrating the construction of planar graphs from K_5 and $K_{3,3}$. For K_5, two embeddings are shown. In the first, vertex 4 is inside the triangle formed by vertices 1, 2, and 3. In the second, vertex 4 is outside. Both embeddings result in "no face for 5". For $K_{3,3}$, two embeddings are shown. In the first, vertex 3 is inside the square formed by vertices 1, 4, 2, and 5. In the second, vertex 3 is outside. Both embeddings result in "no face for 6".	tex.zip (local)
Introduction_to_Graph_and_The Graph_	091	Diagram illustrating two planar graphs, G_1 and G_2. G_1 is a planar graph with 7 vertices and 10 edges. G_2 is a planar graph with 7 vertices and 10 edges, including a cycle of length 6.	tex.zip (local)

The hypergraph $\mathcal{H}$ is shown on the left, and $[\mathcal{H}]_2$ is shown on the right. Below $\mathcal{H}$ is the forest T, and below $[\mathcal{H}]_2$ is the forest $\bar{T}$. Arrows indicate mappings: $\mathcal{H} \rightarrow [\mathcal{H}]_2$, $[\mathcal{H}]_2 \rightarrow T$, and $T \rightarrow \bar{T}$.	tex.zip (local)
Introduction_to_Graph_and_Hypergraph_	196	Diagram illustrating two hypergraphs $\mathcal{H}_1$ and $\mathcal{H}_2$. $\mathcal{H}_1$ is shown on the left, and $\mathcal{H}_2$ is shown on the right.	tex.zip (local)

Introduction_to_Graph_and_2nd graph_	206	 The diagram illustrates a mapping from a complex graph to a simpler one. The top graph has four vertices labeled 1, 2, 3, and 4, arranged in a square. It contains six faces labeled f_1 through f_6. The faces are defined by curved edges connecting the vertices. An arrow points down to a second graph, which is a square with vertices 1, 2, 3, and 4. This second graph has a single face and is connected by straight edges, including a diagonal edge between vertices 1 and 3.	tex.zip (local)
Introduction_to_Graph_and_2nd graph_	207	 The diagram shows two graphs, $\mathcal{H}_1$ and $\mathcal{H}_2$. Graph $\mathcal{H}_1$ on the left consists of three overlapping circles with vertices at the intersections. Graph $\mathcal{H}_2$ on the right consists of a central triangle with vertices at its corners and additional vertices on its edges, all connected by straight lines.	tex.zip (local)

	232	The diagram illustrates a sequence of graph transformations. It begins with a graph C (a diamond shape with nodes 1, 2, 3, 4 and edges D_1, D_2, D_3, D_4) which is equal to the sum of two graphs. The first graph has a vertical edge between nodes 1 and 3. The second graph has a vertical dashed edge between nodes 1 and 3. This is followed by an operation labeled "C-clearing + contraction 13", resulting in a graph with nodes 13, 4, 2 and a vertical edge between 13 and 2. This is then split (labeled "spl. 24") into two graphs: one with a horizontal edge between 4 and 2, and another with a horizontal dashed edge between 4 and 2. This is followed by an operation labeled "C-clearing + contraction 24", resulting in a graph with nodes 13, 4, 2 and a horizontal edge between 4 and 2. This is then split (labeled "spl. 24") into two graphs: one with a horizontal edge between 4 and 2, and another with a horizontal dashed edge between 4 and 2. This is followed by an operation labeled "contraction 24", resulting in a graph with nodes 13 and 24 and a horizontal edge between them. Finally, this is split (labeled "spl. 24") into two graphs: one with a horizontal edge between 13 and 24, and another with a horizontal dashed edge between 13 and 24.	tex.zip (local)

Introduction_to_Graph_and_Type_graph_	234	 The top diagram shows two hypergraphs, $\mathcal{H}$ and $\mathcal{H}'$, separated by an equals sign. Both have four vertices arranged in a square. $\mathcal{H}$ has two hyperedges: one containing the top two vertices and another containing the bottom two vertices. $\mathcal{H}'$ has two hyperedges: one containing the left two vertices and another containing the right two vertices.	tex.zip (local)
Introduction_to_Graph_and_Type_graph_	235	 The left diagram shows hypergraph $\mathcal{H}_1$ with four vertices and two hyperedges, each containing two vertices. The right diagram shows hypergraph $\mathcal{H}_2$ with four vertices and two hyperedges, each containing two vertices.	tex.zip (local)
Introduction_to_Graph_and_Type_graph_	237	 A diagram showing a hypergraph with four vertices arranged in a square. There are two hyperedges, each containing all four vertices. The hyperedges are represented by dashed lines forming a square with internal diagonals.	tex.zip (local)
