2501.06662_E00006	008	■ 0.996	<pre>\begin{aligned} & \text{T}(x)=\left\{y \in \operatorname{ob}\right. \\ & \left.\left(\mathrm{~L}\right)_x\right\}: y \text { is an unfinished } \\ & \text { text of length } N\right. . \text { or } \\ & \left.\left\{y \in \operatorname{ob}\right\} \text { is a finished text such that } y \leq N\right\} . \end{aligned}</pre>	$T(x)=\left\{y \in \operatorname{ob}\left(\mathrm{~L}_x\right): y \text { is an unfinished text of length } N \text { or } y \text { is a finished text such that } y \leq N\right\} .$	$T(x)=\left\{y \in \operatorname{ob}\left(\mathrm{~L}_x\right): y \text { is an unfinished text of length } N \text { or } y \text { is a finished text such that } y \leq N\right\} .$
Conf. MathPix confidence: ■ ≥0.9 ■ 0.5-0.9 ■ <0.5 — no value					
Residual render vs scan (inkdrill): ● C component ● W weak ● S stable ● N noise ● K clean ● not measured					

The remaining 13 flagged rows are stated as a count.

Each differs from its scan by fewer than 20 components, which is the tail of the distribution rather than its bulk: 5 are component (C), 8 weak (W). By MathPix confidence: 4 at ≥0.9, 6 in 0.6-0.9, 3 below 0.6, 0 with none. Out/465 sampled twenty rows drawn from the ≥0.9 band corpus-wide and found eighteen purely typographic differences, one typographic plus a crop overrun, one borderline and *no* unambiguous content errors — so a high-confidence flag here is evidence of a rendering difference, not of a defect. Every row is in report.ink.json.
