

penev_A — formula report

674 inline formulas (section omitted; 1 did not render), 116 display equations, 2 tables, 25 unrecovered image regions.

Unresolved (1)

Identifier	Page	Conf.	LaTeX source	Rendered	Scan image
penev_A_F00526		—	$\Phi^+=\sum_{\mathbf{f}}\mathbf{\Psi}_{\mathbf{f}}\frac{1}{\sigma_{\mathbf{f}}}\left(\mathbf{\Xi}_{\mathbf{f}},\right)$	(not rendered)	—
Conf. MathPix confidence: ■ ≥0.9 ■ 0.5-0.9 ■ <0.5 — no value					
Residual render vs scan (inkdrill): ● C component ● W weak ● S stable ● N noise ● K clean ● not measured					

Flagged, not acted on: 33 rows, none above the reporting threshold.

Each differs from its scan by fewer than 20 components, which is the tail of the distribution rather than its bulk: 14 are component (C), 19 weak (W). By MathPix confidence: 16 at ≥ 0.9 , 9 in 0.6–0.9, 8 below 0.6, 0 with none. Out/465 sampled twenty rows drawn from the ≥ 0.9 band corpus-wide and found eighteen purely typographic differences, one typographic plus a crop overrun, one borderline and *no* unambiguous content errors — so a high-confidence flag here is evidence of a rendering difference, not of a defect. Every row is in `report.ink.json`.
