gilmore-lie-groups_ DIA_0006	40	—	—	—	 The diagram shows a sphere labeled S^2 with a point p on its surface. To the right, a parallelogram represents a plane labeled R^2 with a point q inside it.
gilmore-lie-groups_ DIA_0007	41	—	—	—	 The diagram shows a 3D coordinate system with axes x, y, and z. Above the xy-plane is a hyperboloid-like surface labeled R_3. Below the xy-plane is a surface labeled H^2. To the right, a circle represents a sphere labeled S^1 with an angle θ and a point $\theta + \pi$ marked.
gilmore-lie-groups_ DIA_0008	51	—	—	—	 The diagram shows several matrix structures: 2. $UT(p,q)$: A block matrix with a shaded upper-left block of size p and a shaded lower-right block of size q, with a 0 in the bottom-left corner. 3. $HT(p,q)$: A block matrix with a shaded upper-left block of size p and a shaded lower-right block of size q, with a 0 in the bottom-left corner and a diagonal of 1s in the top-right block. 4. $UT(p,q,r) = UT(p,q+r) \cap UT(p+q,r)$: A block matrix with a shaded upper-left block of size p and a shaded lower-right block of size r, with a 0 in the bottom-left corner. 5. $Sol(n)$: A block matrix with a shaded upper-left block of size n and a shaded lower-right block of size n, with a 0 in the bottom-left corner and a diagonal of $\lambda_1, \lambda_2, \lambda_3, \dots, \lambda_n$ in the top-right block. 6. $Nil(n)$: A block matrix with a shaded upper-left block of size n and a shaded lower-right block of size n, with a 0 in the bottom-left corner and a diagonal of 1s in the top-right block. 7. $A(p,q)$: A block matrix with a shaded upper-left block of size p and a shaded lower-right block of size q, with a 0 in the bottom-left corner and identity matrices I_p and I_q in the top-right and bottom-right blocks respectively.
gilmore-lie-groups_ DIA_0009	65	—	—	—	 The diagram shows a potential energy curve $V(x)$ with regions V_L, $V(x)$, and V_R. Above the curve, the wave function is given as $\psi_L = (e^{ik_L x}, e^{-ik_L x}) \begin{pmatrix} A \\ B \end{pmatrix}_L$ and $\psi_R = (e^{ik_R x}, e^{-ik_R x}) \begin{pmatrix} A \\ B \end{pmatrix}_R$.
